

StuWireless - Using CloudPath to Connect (Windows 7)

1. Go to the **Internet access icon** on the bottom-right corner of your computer screen
- 
2. Select **Get Connected**
 3. Open your web browser, **Internet Explorer is preferred**, but Firefox and Safari will work as well. It is not recommended to use Google Chrome for this setup.
 4. Click on the **Student button** to begin the process.
 5. Select the **Connect My Computer** button. You will be presented with a page and asked to download a configuration tool. Download and save the file to your **Downloads folder** or **Desktop** so you can find it.

6. Once that program is downloaded, **open the application**.
7. You will be prompted to enter your **TCU username and password**. The process will begin to register the computer for the StuWireless network. (**Warning:** You must be registered for classes to be eligible to connect a device.)
8. If there are certain security features activated on your machine, you may be prompted to enter your **computer admin login username and password** a few times. When setup is complete, you will automatically be connected to the **StuWireless** network.

Note: Please reboot your machine if you run into problems with this process.
